

TABLE OF CONTENTS

CHAPTER NO.	TITLE	PAGE NO.
	List of Tables	xi
	List of Figures	xii
	List of Abbreviations	xiv
	Abstract	xvii
1	Introduction	1
	1.1 Diabetic Retinopathy Overview	1
	1.2 Complications due to DR	4
	1.3 Current Diagnostic and Screening Methods	6
	1.3.1 Fluorescein Angiography	6
	1.3.2 OCT Angiography	6
	1.3.3 OCT Angiography	7
	1.3.4 Colour Fundus Photography	7
	1.4 Limitations of Current Diagnostic Approaches	8
	1.5 Role of AI in DR	9
	1.6 Motivation	10
	1.7 Objectives	11
	1.8 Methodology	11
	1.9 Organisation of Thesis	13
2	Literature Survey	15
	2.1 Existing Studies	16
	2.1.1 Microaneurysms lesion detection	16
	2.1.2 Haemorrhage lesion detection	18
	2.1.3 Exudates lesion detection	19
	2.1.4 Machine learning Techniques in DR Detection	20
	2.1.5 Deep Learning Techniques in DR Detection	23
	2.2 Summary	27

CHAPTER NO.	TITLE	PAGE NO.
3	Finetuning Pretrained DL Models for DR Stages Classification	29
3.1	Advantages of Transfer Learning	29
3.1.1	Reducing the Need for Large Datasets	29
3.1.2	Faster Convergence and Lower Computational Costs	29
3.1.3	Improved Generalization	29
3.1.4	Reusability of Knowledge	30
3.1.5	Performance Boost in Specific Domains	30
3.1.6	Reducing the Risk of Overfitting	30
3.2	Significance of the Study	31
3.3	Overview of Pretrained Models' Architectures	31
3.3.1	Finetuned VGG16 Model	31
3.3.2	Finetuned ResNet-50 Model	35
3.3.3	Finetuned InceptionV3 Model	37
3.3.4	Finetuned Densenet121 Model	40
3.3.5	Finetuned EfficientnetV2L Model	43
3.3.6	Ablation Study on Fine-Tuned Pretrained models	46
3.4	Dataset	48
3.4.1	Dataset Partitioning	49
3.4.2	Hyperparameters for finetuned pretrained models	50
3.5	System Configuration	51
3.5.1	Hardware	51
3.5.2	Software	52
3.5.3	Integrated Development Environment	52
3.6	Performance Metrics	52
3.7	Results	53
3.8	Discussion	61
4	Customizing CNN Architectures for Classification of DR Stages	63
4.1	Convolution Operation	63

CHAPTER NO.	TITLE	PAGE NO.
4.2	CNN Layers	65
4.2.1	Convolutional Layer	65
4.2.2	Activation Function	66
4.2.3	Pooling Layer	66
4.2.4	Fully Connected Layer	67
4.2.5	Regularisation in CNN	67
4.2.6	Dropout	67
4.2.7	Batch Normalisation	68
4.3	DR Detection and Classification using CNN	68
4.3.1	Need for Analysing Multiple CNN Architectures for DR Classification	69
4.4	Development of Custom CNN Architectures	69
4.4.1	Custom CNN Model_1 Architecture	69
4.4.2	Custom CNN Model_2 Architecture	72
4.4.3	Custom CNN Model_3 Architecture	74
4.4.4	Custom CNN Model_4 Architecture	76
4.4.5	Custom CNN Model_5 Architecture	79
4.4.6	Structural Comparison of Custom CNN Architectures	83
4.4.7	Inception-ResNet-v2 and custom CNN Model	84
4.4.8	Custom CNN Model	85
4.5	Dataset	86
4.6	Data Augmentation (Oversampling)	87
4.7	Final Normalization & Data Preparation	89
4.8	Hyperparameter Configuration for Custom CNN Models	90
4.9	Results	91
4.10	Discussion	99
5	Hybrid Architecture for Classifying DR Stages	101
5.1	Medical Image Analysis: Transforming Healthcare with ML and DL	101
5.1.1	Advancing Medical Image Analysis: Transitioning from ML and DL to Hybrid	102

CHAPTER NO.	TITLE	PAGE NO.
	Approaches	
5.1.2	Hybrid Approaches in Medical Image Analysis	103
5.1.3	Enhancing DR Image Classification through Hybrid Approaches	104
5.2	Existing Hybrid Model Architecture for DR Classification	106
5.3	Development of Hybrid Model Architecture	107
5.3.1	Hybrid Model Architecture	107
5.3.2	Training process and Hyperparameter Configuration	109
5.4	Dataset	111
5.5	Data Preprocessing and Training Pipeline for Model Evaluation	111
5.6	Image Enhancement Techniques for the Hybrid Model	113
5.6.1	Brightness Enhancement	113
5.6.2	CLAHE	114
5.6.3	Gaussian Blur	115
5.6.4	Sharpening	115
5.7	Results	117
5.8	Discussion	128
6	Conclusion and Future Direction	130
6.1	Finetuning and evaluation of classic DL models	130
6.2	Customizing and evaluation of CNN models	130
6.3	Building a hybrid model and evaluation	130
6.4	Future Scope	131
