

TABLE OF CONTENTS

Chapter	Title	Page
	List of Tables	
	List of Figures	
	List of Appendixes	
I	INTRODUCTION	1
II	REVIEW OF LITERATURE	
	A. Definition of industrial sickness	20
	B. Growth of industrial sickness in India	24
	C. Causes for industrial sickness in India	25
	D. Prediction models of industrial sickness	26
III	METHODOLOGY	
	A. Selection of industries	50
	B. Period of study	51
	C. Selection of sick companies	51
	D. Selection of non-sick companies	51
	E. Database of the study	52
	F. Hypotheses formulated in the study	53
	G. Concepts used in the study	54
	H. Tools of analysis used in the study	58
	I. Models developed in the study	68
	J. Distinguishing features of the models Developed	72
	K. Methodology for testing the hypotheses	73
	L. Tabulation and analysis of data	75

IV	RESULTS AND DISCUSSIONS	
	A. Computation of financial ratios	76
	B. Computation of principal components	83
	C. Analysis of PCA-MDA model of prediction of industrial sickness	89
	D. Analysis of PCA-ENN model of prediction of industrial sickness	119
	E. Comparison of the PCA-MDA model and the PCA-ENN model of prediction of Industrial sickness	149
V	SUMMARY AND CONCLUSIONS	162

BIBLIOGRAPHY

APPENDIX I

PUBLICATIONS

LIST OF TABLES

Table	Title	Page
I	A sample list of the calculated financial ratios of sick and non sick companies for three years prior to the year of sickness	78
II	Financial ratios of 13 companies(exante sample) for the year 2000-01	81
III	Principal Components chosen in the expost sample dataset of 72 companies for the year 1999-2000	85
IV	Principal Components chosen in the exante sample dataset of 13 companies for the year 2000-01	88
V	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-MDA isolated model - expost sample dataset	91
VI	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-MDA isolated model - exante sample dataset	92
VII	Classification accuracy rate of PCA-MDA isolated model pertaining to sick and non sick companies - expost sample dataset	93

VIII	Classification accuracy rate of PCA-MDA isolated model pertaining to sick and non sick companies -exante sample dataset	97
IX	Group statistics and results of single sample test of significance discriminant score pertaining to sick and non sick companies - PCA-MDA isolated model-expost sample and exante sample datasets	101
X	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-MDA non-isolated model - expost sample dataset	104
XI	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-MDA non-isolated model - exante sample dataset	105
XII	Classification accuracy rate of PCA-MDA non-isolated model pertaining to sick and non sick companies -expost sample dataset	107
XIII	Classification accuracy rate of PCA-MDA non- isolated model pertaining to sick and non sick companies –exante sample dataset	110

XIV	Group statistics and results of single sample test of significance of the discriminant score pertaining to sick and non sick companies - PCA-MDA non-isolated model -expost sample and exante sample datasets	114
XV	Group statistics and test of significance results of the discriminant score pertaining to sick and non sick companies - PCA-MDA isolated and PCA-MDA non-isolated models-expost sample data	116
XVI	Group statistics and test of significance results of the discriminant score pertaining to sick and non sick companies - PCA-MDA isolated and PCA-MDA non-isolated models-exante sample data	118
XVII	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-ENN isolated model - expost sample dataset	121
XVIII	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-ENN isolated model - exante sample dataset	122
XIX	Classification accuracy rate of PCA-ENN isolated model pertaining to sick and non sick companies -expost sample dataset	124

XX	Classification accuracy rate of PCA-ENN isolated model pertaining to sick and non sick companies -exante sample dataset	128
XXI	Group statistics and results of single sample test of significance of discriminant score pertaining to sick and non sick companies of PCA-ENN isolated model -expost sample and exante sample datasets	132
XXII	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness- PCA-ENN non-isolated model –expost sample dataset	134
XXIII	Descriptive statistics of the discriminant score pertaining to sick and non sick companies for three years prior to sickness -PCA-ENN non-isolated model –exante sample dataset	135
XXIV	Classification accuracy rate of PCA-ENN non- isolated model pertaining to sick and non sick companies -expost sample dataset	137
XXV	Classification accuracy rate of PCA-ENN non- isolated model pertaining to sick and non sick companies -exante sample dataset	140
XXVI	Group statistics and results of single sample test of Significance of the discriminant score pertaining to sick and non sick companies- PCA-ENN non- isolated model -expost sample and exante sample datasets	144

XXVII	Group statistics and test of significance results of the discriminant score pertaining to sick and non sick companies - PCA-ENN isolated and PCA-ENN non-isolated models-expost sample data	146
XXVIII	Group statistics and test of significance results of the discriminant index pertaining to sick and non sick companies -PCA-ENN isolated and PCA-ENN non-isolated models-exante sample data	148
XXIX	Group statistics, test of significance results and the classification accuracy rates - PCA-MDA and PCA-ENN isolated models -expost sample dataset	151
XXX	Group statistics, test of significance results and the classification accuracy rates - PCA-MDA and PCA-ENN isolated models - exante sample dataset	154
XXXI	Group statistics, test of significance results and the classification accuracy rates -PCA-MDA and PCA-ENN non- isolated models - expost sample dataset	157
XXXII	Group statistics, test of significance results and the classification accuracy rates - PCA-MDA and PCA-ENN non-isolated models -exante sample dataset	159

LIST OF FIGURES

Figure	Title	Page
FIGURE I	Process of Industrial Sickness	23
FIGURE II	Flow of Computation in the PCA-MDA Model	70
FIGURE III	Architecture of the Evolutionary Neural Networks	72
FIGURE IV	PCA-MDA Isolated Model: Classification accuracy for expost sample data set-one year prior to sickness	95
FIGURE V	PCA-MDA Isolated Model: Classification accuracy for expost sample data set-two years prior to sickness	95
FIGURE VI	PCA-MDA Isolated Model: Classification accuracy for expost sample data set-three years prior to sickness	96
FIGURE VII	PCA-MDA Isolated Model: Classification accuracy for exante sample data set-one year prior to sickness	98
FIGURE VIII	PCA-MDA Isolated Model: Classification accuracy for exante sample data set-two years prior to sickness	99
FIGURE IX	PCA-MDA Isolated Model: Classification accuracy for exante sample data set - three years prior to sickness	99

FIGURE X	PCA-MDA Non-Isolated Model: Classification accuracy for expost sample data set- Years 1 and 2 prior to sickness taken together	109
FIGURE XI	PCA-MDA Non-Isolated Model: Classification accuracy for expost sample data set- Years 1, 2 and 3 prior to sickness taken together	109
FIGURE XII	PCA-MDA Non-Isolated Model: Classification accuracy for exante sample data set- Years 1 and 2 prior to sickness taken together	112
FIGURE XIII	PCA-MDA Non-Isolated Model: Classification accuracy for exante sample data set- Years 1, 2 and 3 prior to sickness, taken together	112
FIGURE XIV	PCA-ENN Isolated Model: Classification accuracy for expost sample data set- one year prior to sickness	126
FIGURE XV	PCA-ENN Isolated Model: Classification accuracy for expost sample data set- two years prior to sickness	126
FIGURE XVI	PCA-ENN Isolated Model: Classification accuracy for expost sample data set- three years prior to sickness	127
FIGURE XVII	PCA-ENN Isolated Model: Classification accuracy for exante sample data set- one year prior to sickness	130
FIGURE XVIII	PCA-ENN Isolated Model: Classification accuracy for exante sample data set- two years prior to sickness	130
FIGURE XIX	PCA-ENN Isolated Model: Classification accuracy for exante sample data set- three years prior to sickness	131

FIGURE XX	PCA-ENN Non-Isolated Model: Classification accuracy for expost sample data set- Years 1 and 2 prior to sickness taken together	139
FIGURE XXI	PCA-ENN Non-Isolated Model: Classification accuracy for expost sample data set- Years 1, 2 and 3 prior to sickness taken together	139
FIGURE XXII	PCA-ENN Non-Isolated Model: Classification accuracy for exante sample data set- Years 1 and 2 prior to sickness taken together	142
FIGURE XXIII	PCA-ENN Non-Isolated Model: Classification accuracy for exante sample data set- Years 1, 2 and 3 prior to sickness taken together	142

LIST OF APPENDIXES

APPENDIX I Financial ratios of 72 companies (34 sick and
38 non sick companies) for three years prior to
sickness
