CHAPTER NO.	TITLE	PAGE NO.
	List of Tables	
	List of Figures	
	List of Graphs	
	List of Plates	
	List of Abbreviations	
	Abstract	
1	INTRODUCTION	1
	Hypothesis of the study	8
	Rationale of the study	8
	Objectives of the study	9
	Scope of the study	10
2	REVIEW OF LITERATURE	11
	2.1 Non- Communicable Diseases, prevalence and associated risk factors	12
	2.1.1 Introduction and definition of Non- Communicable Diseases	12
	2.1.2 Prevalence of Non- Communicable Diseases	13
	2.1.3 Risk factors and prevention of Non- Communicable Diseases	14
	2.2 Metabolic Syndrome, prevalence and causes	15
	2.2.1 Various definitions of Metabolic Syndrome	15
	2.2.2 Prevalence of Metabolic Syndrome	17
	2.2.3 Causes/ Risk factors of Metabolic Syndrome	19
	2.3. Parameters to assess Nutritional status of adults relevant to lifestyle	22
	2.3.1 Anthropometric Measurements	22
	2.3.2 Body Composition Analysis Parameters	23
	2.3.3 Energy/ Dietary Intake and Energy Expenditure	27
	2.4 Strategies to Combat Metabolic Syndrome	28
	2.4.1 Dietary pattern to reduce the risk of Metabolic Syndrome	28

CHAPTER NO.	TITLE	PAGE NO.
	2.4.2 Exercise routine to reduce the risk of Metabolic Syndrome	31
	2.4.3 Habits of alcohol and smoking cessation to reduce the risk of Metabolic Syndrome	33
	2.4.4 Creating awareness about healthy lifestyle, body composition and Metabolic Syndrome to increase the Knowledge, attitude and practice of the population to reduce the risk of Metabolic Syndrome	34
	2.5 Research gap in the existing literature	36
3	METHODOLOGY	37
	PHASE I:	
	3.1 Selection of subjects and development of research tools to collect data and validating equipment to be used in the research	39
	3.1.1 Selection of locale for the research study	39
	3.1.2 Sampling method and sampling criteria for the research study	41
	3.1.3 Framing and checking the validity and reliability of the equipment and questionnaires used for performing body composition analysis and collecting the data	43
	3.1.4 Obtaining the Institutional Human Ethical Committee clearance to conduct the research study	44
	3.1.5 Conceptual framework of the research study	45
	PHASE II:	
	3.2 Collection of socio- economic and medical history information from the research subjects	47
	PHASE III:	
	3.3 Evaluation of participants' characteristics and determination of participant's metabolic syndrome	48
	3.3.1 Assessment of anthropometric measurements	48
	3.3.2 Assessment of Biochemical Parameters	53
	3.3.3 Assessment of lifestyle habits of dietary pattern, physical activity level, exercise, smoking and alcohol habits of the subjects	55
	3.3.4 Assessment of Basal Metabolic Rate, Total Energy Expenditure and Energy Balance	57
	3.3.5 Metabolic Syndrome criterion prevalence in the participants	57

CHAPTER NO.	TITLE	PAGE NO.
	PHASE IV:	
	3.4 Assessment of body composition and imparting intervention to the sub sampled metabolic syndrome subjects	58
	3.4.1 Estimating the study's sample size and sampling in accordance with the prevalence	58
	3.4.2 Performing Body composition analysis (BCA) for the enrolled sub-sample of subjects	59
	3.4.3 Imparting lifestyle counselling intervention for the subsampled subjects	63
	PHASE V:	
	3.5 Evaluation of the effects of lifestyle counselling on the metabolic syndrome, body composition metrics, and the subsampled individuals' Knowledge, Attitude, and Practice (KAP)	67
	3.5.1 Assessing anthropometric measurements, biochemical parameters, Lifestyle parameters of Dietary pattern, Physical activity level, Exercise, smoking and alcohol habits in sub-sampled subjects post lifestyle counselling intervention	69
	3.5.2 Assessing the Metabolic Syndrome Criteria sub-sampled subjects post lifestyle counselling intervention	69
	3.5.3 Assessing Body Composition Analysis parameters among the sub-sampled subjects post lifestyle counselling intervention	69
	3.5.4 Assessing Knowledge, Attitude and Practice (KAP) of the sub-sampled subjects post lifestyle counselling intervention	69
	PHASE VI:	
	3.6 Statistical analysis and interpretation	69
4	RESULTS AND DISCUSSION	71
	PHASE I:	
	4.1 Validation and testing the reliability of InBody 770 equipment, and Knowledge Attitude and Practice (KAP) questionnaire	72
	4.1.1 Validating and testing the InBody 770 with DEXA for performing Body Composition analysis	72

CHAPTER NO.	TITLE	PAGE NO.
	4.1.2 Validation of the KAP questionnaire to be used in the study	76
	PHASE II:	
	4.2 Socio-economic profile of the research	78
	4.2.1 Age-wise distribution of the research	78
	4.2.2 Socio- economic profile of the research subjects	80
	PHASE III:	
	4.3 Metabolic Syndrome among the research	83
	4.3.1 Anthropometric measurements of the research subjects	83
	4.3.2 Biochemical parameters of the research subjects	86
	4.3.3 Lifestyle habits of diet preference, physical activity level, exercise, smoking, and alcohol habits of the research subjects	87
	4.3.4 Prevalence of Metabolic Syndrome criteria among the research subjects	96
	PHASE IV:	
	4.4 Assessment of metabolic syndrome subjects, assessment of Body Composition and Imparting intervention to the sub sampled metabolic syndrome subjects	106
		106
	4.4.1 Assessment of sub sampled metabolic syndrome subjects	
	4.4.1.1 Background information of the research subjects	106
	4.4.1.2 Sex and Age-wise distribution of the research subjects	110
	4.4.1.3 Anthropometric measures of the research subjects	111
	4.4.1.4 Biochemical parameters of the research subjects	112
	4.4.1.5 Dietary preference, smoking and alcohol habits of the research subjects	113
	4.4.1.6 Exercise and Physical Activity Level of the research subjects	115
	4.4.2 Metabolic syndrome parameters of sub sampled metabolic syndrome subjects	116
	4.4.3 BCA analysis for the enrolled research subjects	119
	4.4.4 Knowledge, Attitude, and Practice (KAP) of of sub sampled metabolic syndrome subjects	135
	4.4.5 Validation of the developed lifestyle education modules	136

CHAPTER NO.	TITLE	PAGE NO.
	Phase V:	
	4.5 Impact of intervention of lifestyle counselling among the metabolic syndrome research subjects	138
	4.5.1 Impact of intervention on anthropometric measures and BCA parameters in research subjects	138
	4.5.2 Impact of intervention on calorie intake, physical activity level, exercise, smoking and alcohol habits in research subjects	141
	4.5.3 Impact of intervention on Metabolic syndrome criteria in research subjects	145
	4.5.4 Impact of lifestyle counselling on KAP in the research subjects	149
5	SUMMARY AND CONCLUSION	
	Introduction	165
	Rationale of the study	166
	Objectives of the study	166
	Methodology of the study	167
	Salient findings of the study	168
	Conclusion	177
	Limitations	177
	Recommendations for future research	178
