

## TABLE OF CONTENTS

| <b>Chapter No.</b> | <b>Title</b>  | <b>Page No.</b> |
|--------------------|---|-----------------|
|                    | <b>List of Tables</b>   | ix              |
|                    | <b>List of Figures</b>  | x               |
|                    | <b>List of Abbreviations</b>                                      | xii             |
|                    | <b>List of Symbols</b>  | xv              |
|                    | <b>Abstract</b>   | xvi             |
| <b>1</b>           | <b>INTRODUCTION</b>   | <b>1</b>        |
| 1.1                | Deep learning   | 1               |
| 1.2                | Types of Deep Learning Algorithms                                 | 2               |
| 1.3                | Air Pollution   | 7               |
| 1.4                | Air quality   | 9               |
|                    | 1.4.1 Effects of Air quality                                      | 10              |
|                    | 1.4.2 Application of Air quality                                  | 11              |
|                    | 1.4.3 Benefits of Air quality                                     | 12              |
|                    | 1.4.4 Importance of Air quality prediction                        | 12              |
|                    | 1.4.5 Statistical data on Air quality                             | 13              |
| 1.5                | Air quality Index   | 14              |
| 1.6                | Research gap  | 16              |
| 1.7                | Problem Statement   | 16              |
| 1.8                | Objectives of This Research                                       | 16              |
| 1.9                | Contribution of The Thesis  | 17              |
| 1.10               | Organization of Thesis  | 18              |
| <b>2</b>           | <b>LITERATURE SURVEY</b>  | <b>19</b>       |
| 2.1                | Introduction  | 19              |
| 2.2                | Machine Learning methods  | 19              |
| 2.3                | Deep Learning methods   | 22              |
| 2.4                | Transfer Learning methods   | 31              |
| 2.5                | Chapter Summary   | 34              |
| <b>3</b>           | <b>IMPROVED SPARSE AUTO ENCODER USING DEEP LEARNING ALGORITHM</b> | <b>35</b>       |
| 3.1                | Introduction  | 35              |
| 3.2                | Long short-Term Architecture                                      | 35              |

| <b>Chapter No.</b> | <b>Title</b>   | <b>Page No.</b> |
|--------------------|--|-----------------|
| 3.3                | Convolutional Neural Network   | 36              |
| 3.4                | Feed Forward Neural Network  | 37              |
| 3.5                | Autoencoder  | 38              |
| 3.6                | Sparse Autoencoder   | 39              |
| 3.7                | Proposed methodology   | 40              |
| 3.8                | Experimental Results   | 46              |
|                    | 3.8.1 Dataset Description  | 46              |
|                    | 3.8.2 Data Preprocessing   | 48              |
| 3.9                | Performance Metrics Evaluation   | 49              |
| <b>4</b>           | <b>VORONOI CLUSTERING SPARSE AUTOENCODER USING DEEP LEARNING ALGORITHM</b>                   | <b>58</b>       |
| 4.1                | Voronai Clustering   | 58              |
| 4.2                | Proposed methodology   | 58              |
|                    | 4.2.1 Voronai Clustering   | 58              |
|                    | 4.2.2 Improved Artificial Neural Network   | 60              |
| 4.3                | Experimental Results   | 62              |
| <b>5</b>           | <b>TRANSFERRED STACKED BIDIRECTIONAL AND UNIDIRECTIONAL LONG SHORT TERM MEMORY ALGORITHM</b> | <b>69</b>       |
| 5.1                | Transfer Learning  | 69              |
| 5.2                | Proposed Methodology   | 70              |
|                    | 5.2.1 Prediction Model T-SBU-LSTM  | 70              |
|                    | 5.2.2 Architecture of T-SBU-LSTM   | 73              |
|                    | 5.5.3 Pseudo code for T-SBU-LSTM   | 77              |
| 5.4                | Experimental Results   | 79              |
| <b>6</b>           | <b>WASSERSTEIN DISTANCE DEEP TRANSFER LEARNING ALGORITHM</b>                                 | <b>87</b>       |
| 6.1                | Wasserstein Distance (WD)  | 87              |
| 6.2                | Proposed WD-DTL  | 87              |
|                    | 6.2.1 CNN Based feature extractor  | 89              |
|                    | 6.2.2 Classification with classifier   | 90              |
|                    | 6.2.3 Algorithm -WD-DTL  | 90              |
| 6.3                | Experimental Results   | 93              |
| <b>7</b>           | <b>OVERALL RESULTS AND DISCUSSION</b>  | <b>102</b>      |

---
